Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-35,55 and 47-51 , drawn to method and apparatus for specimen processing, classified in class 436, subclass 43.
- II. Claims 36-37,43 and 52-54, drawn to method of specimen dewaxing, classified in class 435, subclass 40+.
- III. Claims 38-39 and 44, drawn to method of hemaloxylin/eosin staining, classified in class 435, subclass 1.
- IV. Claim 40-42 and 45-46 drawn to method of antigen retrieval , classified in class 435, subclass 7.9.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II-IV are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different designs, modes of operation, and effects (MPEP § 802.01 and § 806.06). In the instant case, the different inventions I and II-IV have different designs, modes of operation and effects.

Art Unit: 1743

Because these inventions are independent or distinct for the reasons given above and there would be a serious burden on the examiner if restriction is not required because the inventions have acquired a separate status in the art due to their recognized divergent subject matter, restriction for examination purposes as indicated is proper.
